## SUMMARY

---

Junior Software Engineer aspiring to enter the role of an Intern Developer Assistant.

## SKILLS

---

- Project management
- Python
- Flask
- C
- Mysql
- Sqlalchemy
- Javascript
- Collaboration and Teamwork

## Projects

---

### Salvator - [Link Github Link](#)

Salvator is a medical record storage website that provides a central location for all of your important medical information, making it easy to view, update, and share your records with healthcare professionals.

With Salvator, you can take control of your healthcare and reduce the risk of misdiagnosis and wrong prescriptions.

### Airbnb Clone - [Github Link](#)

The goal of the Airbnb project is to eventually deploy a simple copy of the Airbnb Website. A command interpreter is created in the project to manage objects for the Airbnb website.

## Roles

---

### Salvator

- Designed the database schema and defined table relationships.
- Built a console for server-side interactions.
- Created the application models, methods and storage engine.
- Built an API which enables easy communication between the application backend and frontend.
- Deployed the database and API.
- Maintained the application backend through providing updates and debugging when necessary.
- Setup a simple backup system with mysqldump and cron daemon.

### Airbnb Clone

- Updated application models, methods and storage engine.
- Built an API which enables easy communication between the application backend and frontend.
